Appln. No. 10/695,113

Attorney Docket No. 10541-1874

## I. Amendments to the Claims

- 1. (Previously Presented) A system for identifying a location of a vehicle, the vehicle including a controller for monitoring status of a component of the vehicle, the system comprising:
- a sensor configured to transmit a component ID signal and a component status signal;
- a first receiver remote from the vehicle and configured to collect a component ID signal from the sensor;
- a processor in communication with the first receiver and adapted to receive the component ID signal; and
- a database in communication with the processor for storing the component ID and the receiver location, wherein the processor is configured to correlate the component ID with a vehicle ID and a location of the first receiver to determine a vehicle location.
- 2. (Original) The system according to claim 1, v/herein the processor is configured to correlate the component ID with a time that the component ID was received.
- 3. (Original) The system according to claim 1, wherein the sensor includes a radio frequency transmitter.
- 4. (Original) The system according to claim 1, wherein the sensor is a pressure sensor.
- 5. (Original) The system according to claim 1, wherein the sensor is mounted inside a tire.
- 6. (Original) The system according to claim 1, wherein the sensor is a tire pressure sensor mounted to a wheel of the vehicle.

Attorney Docket No. 10541-1874

- 7. (Original) The system according to claim 1, wherein the component ID signal and the location of the first receiver are transmitted to the processor and the processor is located in a remote location to service a plurality of receivers.
- 8. (Original) The system according to claim 7, further comprising a second transmitter and second receiver connected between the first receiver and the processor.
- 9. The system according to claim 1, wherein the (Original) component ID has greater than 264 combinations.
- 10. (Original) The system according to claim 1, wherein a vehicle identification number is correlated with the component ID signal.
- 11. (Original) The system according to claim 1, further comprising a user interface that indicates a time and the location the component ID was received.
- 12. The system according to claim 1, wherein the user interface indicates a time and the location that a component ID was received in response to a vehicle identification number input.
- 13. (Original) The system according to claim 1, wherein the user interface indicates the traffic density based on the location of the receiver.
- 14. (Previously Presented) A system for identifying a location of a vehicle, the vehicle including a controller for monitoring status of a component of the vehicle, the system comprising:

Appln. No. 10/695,113

Attorney Docket No. 10541-1874

a sensor for measuring a tire pressure and configured to transmit a component ID signal and a component status signal;

a receiver remote from the vehicle and configured to collect signals from the sensor:

a processor in communication with the receiver to obtain the component ID; and

a database in communication with the processor for storing the component ID and the receiver location, wherein the sensor is a tire pressure sensor mounted to a wheel of the vehicle, wherein the processor is configured to correlate the component ID with a vehicle ID and a location of the first receiver to determine a vehicle location.

- 15. (Original) The system according to claim 14, wherein the processor is configured to correlate the component ID with a time that the component ID was received.
- 16. (Original) The system according to claim 14, wherein the sensor includes a radio frequency transmitter.
- 17. (Original) The system according to claim 14, wherein the component ID signal and the location of the receiver are transmitted to the processor and the processor is located in a central location to service a plurality of receivers.
- 18. (Original) The system according to claim 14, wherein the component ID has greater than  $2^{64}$  combinations.
- 19. (Original) The system according to claim 14, wherein a vehicle identification number is correlated with the component ID signal.

Attorney Docket No. 10541-1874

- 20. (Original) The system according to claim 14, further comprising a user interface that indicates a time and the location the component ID was received.
- 21. (Original) The system according to claim 14, wherein the user interface indicates a time and the location that a component ID was received in response to a vehicle identification number input.
- 22. (Original) The system according to claim 14, wherein the user interface indicates the traffic density based on the location of the receiver.
